

Session 2.4: Midterm Analytics Pipeline Defense Part 2: Exploratory Findings and Executive Review

PEDAGOGICAL AGENDA

1:2 Delivery Rhythm

Session Learning Architecture

Structured 3-hour applied computing session designed for business students with zero prior coding experience.

- **Phase 1 (60 Min Lecture):** Computational foundations, business vocabulary, and syntactic mechanics.
- **Phase 2 (120 Min Lab):** Guided hands-on implementation, error diagnosis, and AI co-pilot resolution.
- **Zero Fluff Mandate:** Focus directly on executable Python code, tabular data wrangling, and commercial intelligence.

STRATEGIC OUTCOME

Operational Autonomy

Business Analytical Competency

Transforming passive spreadsheet users into autonomous programmatic decision makers.

- **Speed & Scale:** Processing datasets exceeding spreadsheet limits with instantaneous vectorized execution.
- **Repeatable Pipelines:** Replacing manual copy-paste workflows with fully automated Python scripts.
- **AI Debugging Literacy:** Leveraging modern IDEs to diagnose and resolve errors independently.

Core Computational Keywords & Business Meaning

CONCEPT 01

Core Keyword

Reproducible Data Pipeline

A self-contained, end-to-end Python script execution sequence that reliably transforms raw data into verified executive reports with zero manual intervention.

CONCEPT 02

Core Keyword

Executive Code Defense

Articulating the business rationale, methodology, and computational assumptions behind an analytics codebase to executive decision-makers.

CONCEPT 03

Core Keyword

Exploratory Data Findings

Structuring quantitative insights into concise, actionable findings linked directly to operating cash flows and margin expansion.

CONCEPT 04

Core Keyword

Cross-Functional Technical Translation

The ability to explain computational trade-offs, data limitations, and algorithmic results to non-technical stakeholders.

Computational Foundations & Business Operations

Core Programming & Computational Foundations

Architecture

Trace execution step by step, use clear program structure, and diagnose errors from the traceback.

PILLAR 02

Architecture

Code Auditability in High-Stakes Environments

In corporate finance and strategic planning, unverified analytics pipelines create catastrophic financial risks. A formal code defense requires students to demonstrate that every calculation traces back to audited primary records.

PILLAR 03

Architecture

Communicating Analytics to Non-Technical Leadership

Senior leadership rarely reads raw Python code. Analysts must present clear visual exhibits, executive summary metrics, and explicit strategic trade-offs, maintaining code as the verifiable engine underneath.

PILLAR 04

Architecture

Peer Review and Code Auditing

Evaluating external codebases builds critical debugging and quality assurance skills. Analysts inspect code for hard-coded assumptions, fragile cell dependencies, and unhandled exception paths.

Google Antigravity IDE Architecture & AI Debugging Protocol

[1] File Explorer

Project Hierarchy

Manage datasets in data/, scripts in root, and exported artifacts.

[2] Code Editor

Syntax Workspace

Modern syntax highlighting, lint diagnostics, and line-by-line script authoring.

[3] AI Agent Chat

AI Pair Programmer

Paste error screenshots directly to inspect root causes and get verified fixes.

[4] Terminal

Execution Engine

Run Python scripts (python script.py) and view console logs and tracebacks.

Zero-Friction AI Error Resolution Protocol

1. **Capture:** Press Win + Shift + S to clip terminal error traceback.
2. **Paste:** Press Ctrl + V into AI Chat [3] with "Explain root cause & fix".
3. **Apply:** Review the explanation and apply verified fix into Editor [2].

Script Demonstration 1: Midterm Analytics Pipeline Defense Part 2: Exploratory Findings and Executive Review

```
1 import time
2     import pandas as pd
3
4     start_time = time.time()
5     df = pd.read_csv("data/session_02_04_dataset.csv")
6
7     # Compute platform take rate and cash flows
8     df["Recognized_Revenue_USD_M"] = df["Gross_Merchandise_Value_USD_...
9     df["Cash_Flow_Conversion_Pct"] = (df["Operating_Cash_Flow_USD_M"]...
10                                     )_M"] * (df
11     elapsed_time = time.time() - start_time
12     print(f"Pipeline Executed in {elapsed_time:.4f} seconds | Process..{df})
                                     } seconds
```

```
$ python session_2_4_demo_1.py [Exit 0]
```

1 Syntactic Structure

Importing production libraries and defining clean analytical data structures.

2 Vectorized Transformation

Applying deterministic operations across the full dataset without fragile cell references.

3 Console Verification

Emitting formatted business KPIs to the terminal for auditability and compliance.

Script Demonstration 2: Midterm Analytics Pipeline Defense Part 2: Exploratory Findings and Executive Review

```
1 segment_audit = df.groupby("Market_Segment").agg(  
2     Total_GMV_USD_M=("Gross_Merchandise_Value_USD_M", "sum"),  
3     Total_Revenue_USD_M=("Recognized_Revenue_USD_M", "sum"),  
4     Total_Operating_Cash_Flow_USD_M=("Operating_Cash_Flow_USD_M", "..._M"),  
5     Mean_Take_Rate=("Platform_Take_Rate_Pct", "mean")  
6 )  
7 print("Geographic Cash Flow Conversion Audit:\n", segment_audit)
```

```
$ python session_2_4_demo_2.py [Exit 0]
```

1 Syntactic Structure

Importing production libraries and defining clean analytical data structures.

2 Vectorized Transformation

Applying deterministic operations across the full dataset without fragile cell references.

3 Console Verification

Emitting formatted business KPIs to the terminal for auditability and compliance.

Script Demonstration 3: Midterm Analytics Pipeline Defense Part 2: Exploratory Findings and Executive Review

```
1 import hashlib
2
3 summary_str = segment_audit.to_string()
4 audit_hash = hashlib.sha256(summary_str.encode("utf-8")).hexdigest...[:12]
5 segment_audit.to_csv("data/midterm_defense_summary.csv")
6 print(f"Audited Executive Summary Exported. Verification Hash: {a...t)[:12]
      h: {audit_
```

```
$ python session_2_4_demo_3.py [Exit 0]
```

1 Syntactic Structure

Importing production libraries and defining clean analytical data structures.

2 Vectorized Transformation

Applying deterministic operations across the full dataset without fragile cell references.

3 Console Verification

Emitting formatted business KPIs to the terminal for auditability and compliance.

Interactive Two-Tier Lab Protocol & AI Diagnosis

EXERCISE 1

Guided Lab

Foundational Implementation

Step-by-step guided practice establishing baseline syntax mastery in Antigravity IDE.

- **Step 1:** Ingest dataset from `data/session_2_4_dataset.csv`.
- **Step 2:** Implement core analytical functions and compute primary business metrics.
- **Step 3:** Format console outputs and verify calculations against baseline ledger totals.
- **Step 4:** Run in Terminal [4] and confirm clean execution with exit code 0.

EXERCISE 2+

Coding Challenge

Advanced Scripting & AI Debugging

Applied programming challenge expanding pipeline logic and resolving intentional exceptions.

- **Task 1 (Pipeline Expansion):** Add secondary business unit logic and multi-tier calculations.
- **Task 2 (Deliberate Error & AI Capture):** Introduce intentional syntax or type error, capture traceback with `Win + Shift + S`, and diagnose via AI Chat [3].
- **Task 3 (Verified Production Run):** Apply verified fix, export audit output, and confirm zero errors with return code 0.
